

TMHO Admiral Series Marina Handlers

The TMHO marina lift includes a Type C carriage with integral side shift and fork positioners. Also, an independent side shift and swing fork type carriage is available with two versions of fork spread to accommodate varying boat widths.

Forks are formed tubing on blades with no welds. Padding prevents boat slippage while retaining durability.

The TMHO Admiral Series' innovative offset operator station affords easy ingress/egress and maximum all-around visibility with the 3-stage mast. Left side narrow access available.

Independent side shift/swing fork carriage.

The TMHO includes all of the TMH features and components in addition to Taylor's innovative offset operator station, 3-stage mast, and carriage.

The TMHO's 3-stage mast provides a reduced mast height for marina barns with height restrictions.

Right front-mounted vision aid system is standard on TMHO models.
